Read these operating instructions carefully before using the appliance for the first time and preserve this booklet for later reference. Pass this booklet on to whoever might acquire the appliance at a future date.

RETRO KETTLE KH 1025

Intended use

This appliance is intended for the boiling-up of water in domestic households. It is not intended for use with other liquids or for commercial use.

Technical Data

Voltage : 220 - 240 V ~ / 50 Hz

Power consumption : 2200 W

- ❶ In older electrical installations, the building fuse (12A) may be triggered due to the high power consumption.

Safety information

To avoid potentially fatal injury through electric shock:

- Ensure that the base with the electrical connections does not come into contact with water! If it has unintentionally come into contact with water, first allow it to dry out completely before taking it into use.
- Only use the water boiler with the supplied base.
- Ensure that the power cable never becomes wet or damp during operation. Lay the cable so that it cannot be trapped or otherwise damaged.
- To reduce the risk of injury, arrange for defective power plugs and/or cables to be replaced at once by qualified technicians or our Customer Service Department.

- Always remove the plug from the power socket after use. Simply switching the appliance off is not sufficient, as the appliance is under power for as long as the plug is connected to the socket.

⚠ *To avoid burns and other injuries:*

- Always heat water with the lid on, otherwise the automatic switch-off does not function correctly. Boiling water could then spray out over the rim.
- Hot steam clouds may be released. Additionally, the kettle becomes very hot during use. Wear oven mitts.
- Ensure that the appliance is standing securely and vertically before switching it on. Boiling water can cause an unstable kettle to fall over.
- This appliance is not intended for use by individuals (including children) with restricted physical, physiological or intellectual abilities or deficiencies in experience and/or knowledge unless they are supervised by a person responsible for their safety or receive from this person instruction in how the appliance is to be used.
- Children should be supervised to ensure that they do not play with the appliance.

Operating Elements

- ① Handle
- ② Lid with knob
- ③ Scale
- ④ ON/OFF switch with integrated control lamps
- ⑤ Base
- ⑥ Pourer-sieve

Commissioning

- Before taking the appliance into use, ensure that ...
- the appliance, plug and power cable are in good working order and...
- all packaging materials have been removed from the appliance.
- Fill the appliance up to the MAX marking on the scale ③ with a water and vinegar mixture having a mix-ratio of 6:1 and then bring it to be boil – as described in the next section.

Warning

Do not inhale the vapours escaping during the boiling process! This could lead to irritation of the mucous membranes and an indisposition.

- When the process is finished, pour the water-vinegar mixture away.
- Rinse the kettle out with clear water.
- Fill the appliance with water up to the MAX marking on the scale ③ and then bring it to be boil. When done, pour it away also.

Boiling water

Danger

Never place the electrical base ⑤ near water – life-threatening danger!

- Lift the kettle off of the base when filling it!
 - Remove the lid ② in that you pull it upwards.
 - Hold the kettle upright while filling it. Only in this way can you correctly read the markings on the scale ③.
- Fill the kettle ...

- at least to the MIN mark, so that the appliance does not overheat,
- no higher than the MAX mark, so that no boiling water spills out.
- First close the lid ②...
- and then place the kettle on the base ⑤ such that it is standing absolutely upright on the base ⑤.
- Now insert the power plug into the power socket ...
- and press the ON/OFF switch ④ upwards until it engages.
- The control lamps integrated into the ON/OFF switch ④ indicate that the appliance is now heating the water up.
- The appliance switches itself off and the control lamps go out as soon as the water is on the boil. The ON/OFF switch ④ springs down.

Warning

Remove the plug from the wall socket before you lift the kettle from its base ⑤. This prevents causing a potential short circuit by water possibly spilling out of the carafe and falling onto live electrical connections in the base ⑤.

Injury hazard

For safety reasons, the lid ② should not be opened while the water is boiling or is very hot. There is a risk of receiving severe scalds.

Cleaning and Care

Danger

Do not open any part of the housing. There are no user-servicable elements inside. An open housing can create the risk of a lethal electrical shock.

-  Never submerge any parts of the appliance in water or other liquids! This can create the risk of a life-threatening electrical shock if residual liquid comes into contact with powered components.

Before cleaning the appliance,

- first, remove the plug from the power socket and allow the appliance to cool down completely.
- Clean the exterior surfaces and the power cable with a slightly damp cloth. Be sure to dry the appliance well before taking it back into use.
- Never use detergents, abrasive cleaners or solvents. These can damage the appliance.

In the event of scale deposits:

- Obtain any decalcifying agent suitable for kitchen utensils (e.g. decalcifiers for coffee machines) from a hardware shop. Proceed as detailed in the instructions provided for the use of the decalcifying agent.

Removing/replacing the pouring sieve

- Take the lid  off.
- Press the flap on the pourer-sieve  down and pull it inwards. Remove it from the kettle.
- Clean the pourer-sieve  with a lightly moistened dish cloth.
- After cleaning it, replace the pourer-sieve : Take hold of it by the flap, then position the lower lug, from the inside, into the lower recess inside the pourer. Then press the upper lug into the recess until the pourer-sieve  is sitting firmly.

Note

Should the scale deposits in the pourer-sieve  be firmly settled, lay it in a water-vinegar solution, with a ratio of 6:1, for a few hours. The scale deposits will dissolve themselves. Rinse the pourer sieve  with lots of clear water.

Storage

Allow the appliance to cool down completely before putting it into storage.

- Wind the power cable around the holder on the bottom of the appliance.
- Store the appliance in a dry place.

Disposal

Do not dispose of the appliance in your normal domestic waste.

Dispose of the appliance through an approved disposal centre or at your community waste facility. Observe the currently applicable regulations. In case of doubt, please contact your waste disposal centre.

Dispose of the packaging materials in an environmentally responsible manner.

Warranty and Service

You receive a 3-year warranty for this appliance as of the purchase date. The appliance has been manufactured with care and meticulously examined before delivery. Please retain your receipt as proof of purchase. In the case of a warranty claim, please make contact by telephone with our service department. Only in this way can a post-free despatch for your goods be assured.

The warranty covers only claims for material and manufacturing defects, not for worn parts or for damage to fragile components, e.g. buttons or batteries. This product is for private use only and is not intended for commercial use.

If this product has been subjected to improper or inappropriate handling, abuse, or modifications not carried out by one of our authorised sales and service outlets, the warranty will be considered void. Your statutory rights are not restricted in any way by this warranty.
